

# **SEELEGUMES**

Sustainable preservation of indigenous  
South East European legumes and their  
traditional food and feed products

Activities in 2011 and 2012  
Agriculture Faculty Banja Luka

- FABL role in this project is through collecting and mapping of seed material (vetchlings, faba bean, vetches), ex situ and in situ preservation and characterization of collected accessions.
- Exchanges of this material between partners will be one of the activities.
- All this activities were connected with other international project, in which group for fodder crops had active role, as well as, with activities in ECPGR

During 2011 collection expeditions for collecting legume species were done in four regions:

- Mountains Šiša and Vlašić and
- Regions Mliništa and Nevesinje

In autumn 2011 field trial with existing and collected accessions is established. Trial was established together with accessions from our partners from Novi Sad.

First annual workshop in Banja Luka, 19-21. October 2011.

Trial with 20 accessions of green pea and 13 accessions of faba bean.

**“The Norwegian Programme in Higher Education,  
Research and Development in the Western Balkans  
The Agriculture Sector (HERD/Agriculture)”  
Ongoing projects**

- Grassland management for high yield and quality in Western Balkan
- Mineral improved food and feed crops for human and animal health (HERD Project, Norway and WB countries)
- Research, education and knowledge transfer promoting entrepreneurship in sustainable use of pastureland/grazing
- Agricultural adaptation to climate change – networking, education, research and extension in the West Balkans

Trials with legumes in south

Trials at natural pastures

Thank You!
