## **AGROECOLOGIE- INRA Dijon - Partner 10 – WP2**

### Participants:

Dr Gérard DUC

Mr Pascal MARGET

Mr Jean-Bernard MAGNIN-ROBERT

Mr Damien OLLIVIER

**Scientist**

**Engineer-Faba bean breeder**

**Engineer assistant - Germplasm manager**

**Technician**

# *Intermediate report ERA-168*

## **AGROECOLOGIE- INRA Dijon - Partner 10 – WP2**

Context :

In the new context of agriculture eco-aware with lower pesticide input, the objective of INRA proposal is to identify a genetic determinism for lower Bruchus susceptibility in Vicia faba collections.

Faba bean accessions from :

- (1) The collection of INRA Dijon (collection recognised by CGIAR- TRUST)
- (2) accessions collected by SEELEGUME partners  
will be assessed for bruchus tolerance in field conditions.

*Bruchus rufimanus Boh.*

# *Intermediate report ERA-168*

## **AGROECOLOGIE- INRA Dijon - Partner 10 – WP2**

### Our proposal:

- 1) TO COLLECT SAMPLES OF SEEDS FROM YOUR GERMPLAM WICH PRESENTS LOW BRUCHUS DAMAGES WITHOUT INSECTICIDE**  
or  
**THAT YOU MAY CONSIDER TO BE OF INTEREST FOR THIS TRAIT**  
**(seed size, color size, geographical origine , ....)**
  
- 2) TO ASSESS THIS COMMON GERMPLASM FOR BRUCHUS TOLERANCE**  
-IN OPEN FIELD CONDITIONS  
-WITHOUT INSECTICIDE APPLICATION  
-IN A SPECIFIC DEVICE IN DIJON AND IN ANOTHER PARTNER SITE  
  
**IN ORDER TO CROSS CULTIVARS ORIGIN x BRUCHUS ORIGIN**

## Field assessment in Dijon 2012:

28 cultivars

Plot size : 2 lines of 30 plants ( 2m x 0.50 )

2 replications

1 common control (cv Melodie) near each experimental plot

## Traits scored

Bflo, Stage FP2 (1<sup>st</sup> pod 2cm), Eflo

Pod size, Plant height, Flower color ,TSW, hilum color.

Mechanical harvesting and damage recording on 2 samples of 100 seeds/plot

### Damages recording :

% seeds with hole with or without adults (a)  
% seeds with superficial damages -bites (b)

Total damages (a+b)  
&  
% larvae mortality  
 $(b / a+b) * 100$

## Common germplasm : 28 genotypes

Common germplasm was shared and assessed under restricted conditions of uses precised in Material Transfert Agreements.

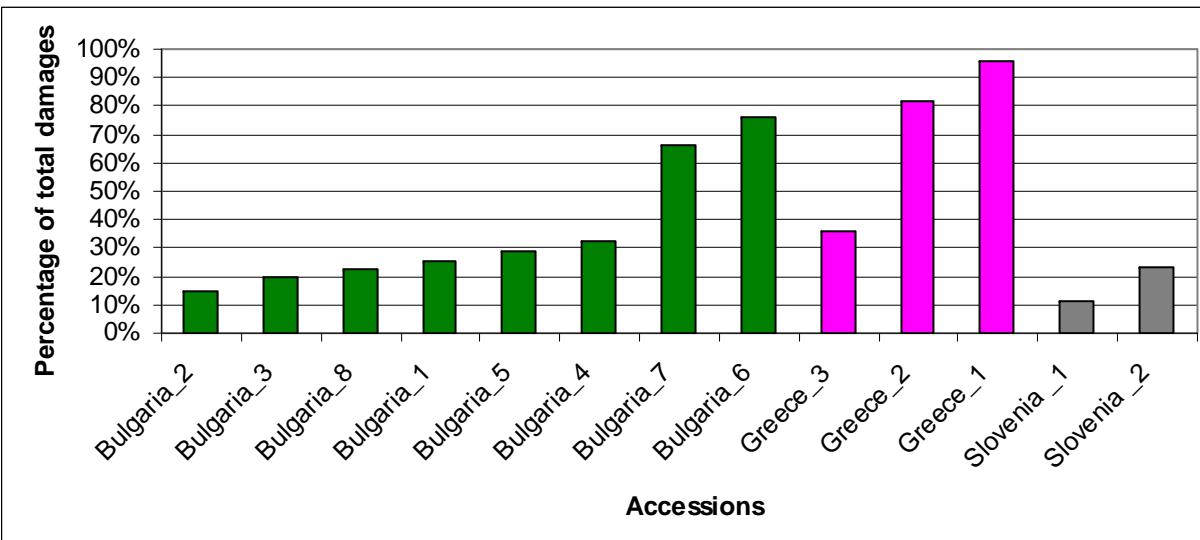

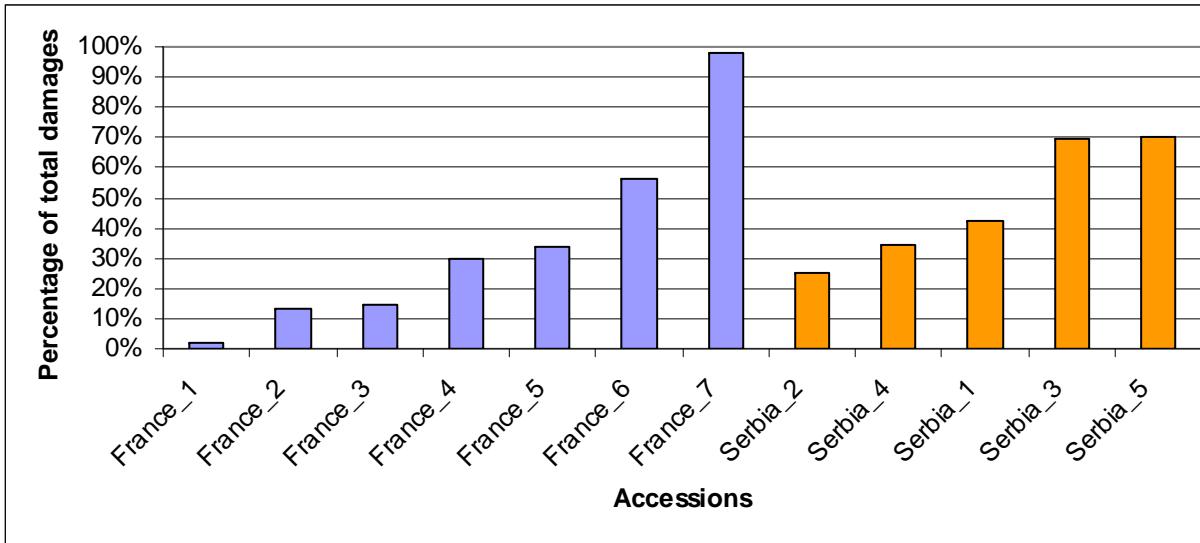

# Field assessment in Dijon 2012:

## First results : total damages

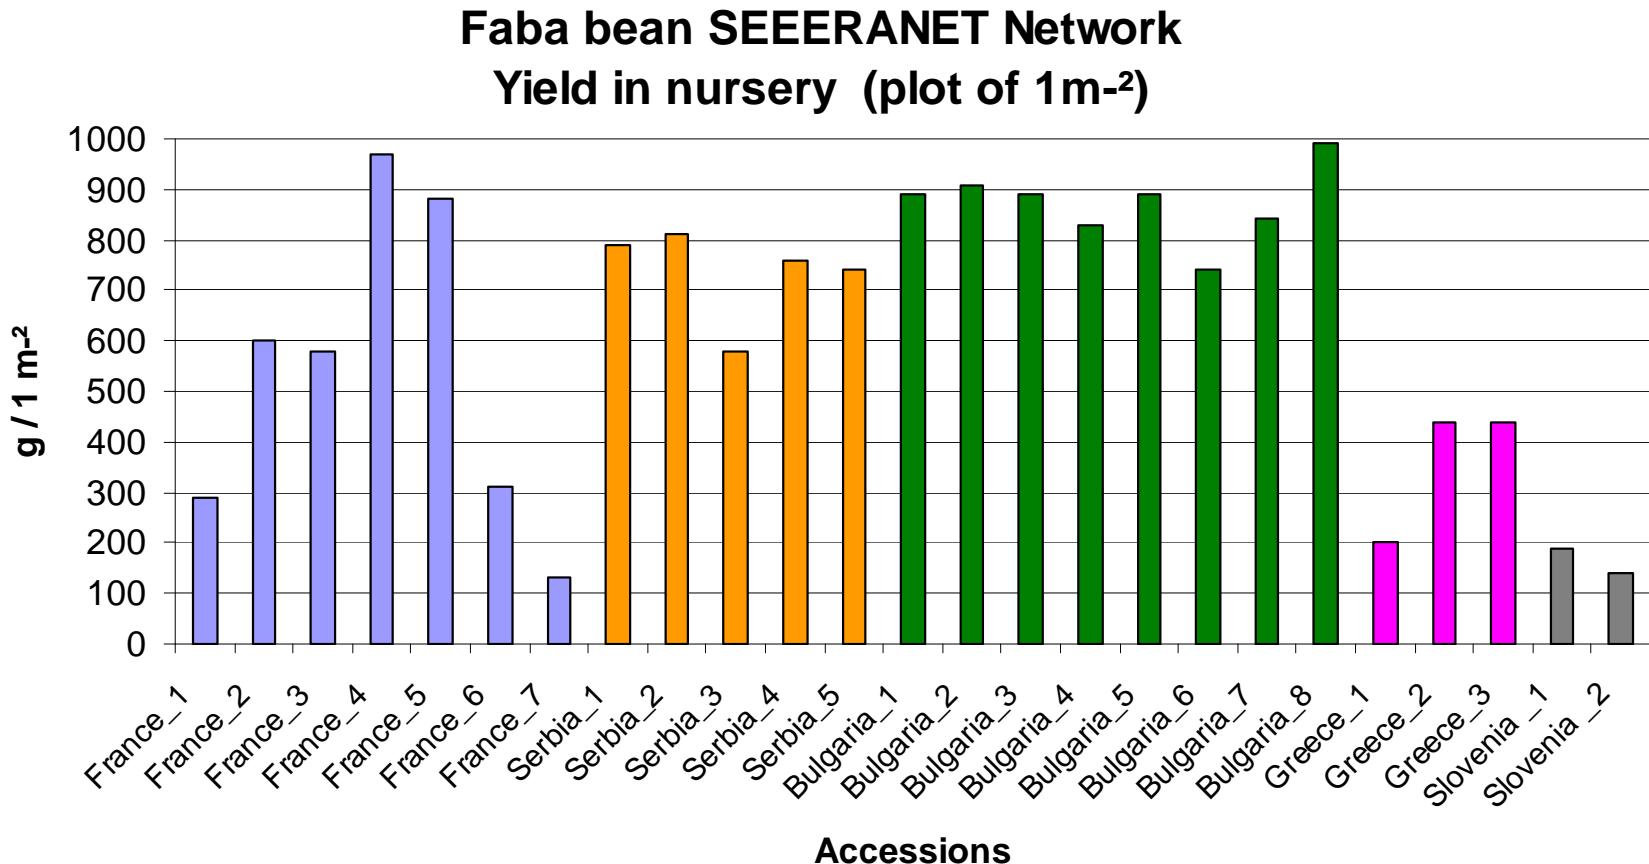

Using neighbour control allows to make a cartography of the intensity of the total damages in the field.

# Field assessment in Dijon 2012: First preliminary results : total damages

# Field assessment in Dijon 2012: First preliminary results : yield in nursery

# Thanks for your attention
